# Each Restaurant owns A Dynamic Restaurant Panel for Food Ordering & Delivery

A Restaurant can Join Easily

Restaurant App

Landing Page

A laptop screen displaying the "Restaurant Registration Application". The top navigation bar includes Home, Browse Web, Privacy Policy, Contact, and a "Get Us" button. The main form is titled "Restaurant Information" and consists of three steps: General Information, Business Plan, and Complete. The first step is active, showing fields for Restaurant Name (Default: Ex: ABC Company), VAT/TAX (N/A), Restaurant Address (Default: Restaurant Address), Min Delivery Time (30), Max Delivery Time (45), Minutes, and two file upload fields for Restaurant Cover Photo and Restaurant Logo. There are also dropdown menus for Language (Default: English[EN], Arabic - انجليزية[AR], Spanish - español[ES]) and a "Choose File" button for the logo.

## ● Customer Report

## **Remarkable Features of Foodfunda:**

As per the previous statement, Foodfunda is jam-packed with outstanding features which can help you to make your online ordering and delivery easier, and smarter than ever before.

### **Accurate Zone-based Business:**

From the admin panel, numerous zone or areas can be set up to operate the business. Setting the business coverage area is as easy as summing 2+2 using the map drawing tool of Foodfunda . And food can only be ordered according to respective business area customers.

### **Set Your Business Up:**

Using Business Settings in the admin panel, you can easily set up your business. There's more in this section! From this section, you can integrate- social media, and payment methods, and configure- mail, SMS module, and notifications settings. Lastly, you can set your Terms and Conditions, Privacy Policy, and About Us page up!

.

## **Admin Commission Feature:**

The admin can set a default commission for all restaurants from the admin panel however, if the admin want can set individual commission for a specific restaurant. Not only on restaurants but also on the delivery charges.

## **Multi Restaurant Support:**

How many restaurants do you want to add to your business? Make the number countless! Foodfunda supports multi restaurant business model. As a result, you can add the number of restaurants you want. There is no limit whatsoever.

## **Multilingual Support:**

No matter in which country you're in and want to operate your business, Foodfunda got your back here. The apps support RTL and any language.

## **SMS OTP Integrated:**

To keep your food ordering and delivery business safe and secure, the SMS OTP system has been integrated with Foodfunda . By having these bunch of integrated SMS gateways, you can easily verify your users in a smarter way.

## **Orders & Dispatch Management:**

Handling orders is as easy as pie with Foodfunda. You'll get a complete overview of your order status from the Orders section of the Admin panel. On the other hand, the dispatch management section will help you to monitor your all ongoing orders.

## **Food Management:**

As an admin, you can control the whole Food section by managing categories and subcategories, attributes, addons, and more. Plus, you can add products to any restaurant. And the Restaurant panel also will get a food management feature.

## **Order Scheduling:**

You can schedule orders within a set timeframe (each slot for 30 minutes) using Foodfunda. While you're having your breakfast, you can order your lunch and dinner with Foodfunda.

## **Deliveryman Management:**

You can add deliverymen as many as you want and manage them effectively in the admin panel. Hiring a deliveryman is possible in two ways: freelance or salary-based. For deliveryman, you'll get an app by which you can operate your delivery system quite simply.

## **Business Promotion:**

With Foodfunda, you can easily promote your business. The Promotions section in the admin panel will allow you to do it. Using campaigns, banners, coupons, and push notifications you can take your marketing to a whole new level.

## **Customer Management:**

This admin panel section comprises many things related to customers. From viewing customer lists, wallets, loyalty points, and subscribed emails to customer live chat; all are under one roof! Manage your customers effectively and GROW!

## **Direct Chat with Admin:**

Customers can directly chat with Admin for any issues or queries. Most of the online ordering and delivery systems don't have this feature but Foodfunda provides this for better customer engagement.

## **Employee Management:**

The more your business grows, the more people you need to handle all things! That's why Foodfunda comes with an Employee management section for you! You can add employees, and assign them particular roles to manage your business smoothly.

## **Analyze Report and Statistics:**

Foodfunda Report management section of the admin panel helps you to get the day-wise and food-wise reports. As a result, taking the required steps on anything that is not doing good, will be easier for you.

## **100% Responsive & Feature-packed App (Android & iOS):**

You will get Foodfunda mobile app source code with this bundle. We developed this by flutter so the app can be usable on both android and iOS.

## **Built-in POS System:**

To execute online payments, POS service is now a must. And each restaurant is likely to pay extra for this. But with Foodfunda, you'll be getting this service totally FREE of cost as it's included in the bundle. Having this service in your system, restaurant owners can manage walk-in customer's orders easily.

## **Integrated All the Popular Payment Gateways:**

All the payment gateways have been integrated with the system to manage the payment procedure from anywhere in the world.

## **Outstanding System Settings:**

There are two different themes have been added for you. You can handle the app and landing page settings from the admin panel. A built-in gallery is also available and ReCaptcha is for security purposes.

## **Hassle-free Transaction Management:**

You can easily collect cash from restaurants and delivery from the admin panel's transaction management system. Not only just this, restaurant withdraws, and deliveryman payments are also manageable through the admin panel.

## **Dark Mode**

Nowadays, Dark mode is everywhere and has become a mandatory feature in the modern world. Likewise, users of Foodfunda can use both dark & light modes based on their preferences, as the entire system supports both visual modes.

## **Password Recovery System**

Forgetting passwords are very common for everyone. That's why recovering the forgotten password is a must! Foodfunda users can easily recover their login password using the proper recovery system.

# **Restaurant and Deliveryman Self-Registration**

Seeing the benefits and facilities of Foodfunda, anyone wishes to be a part of your platform. That's why we have the self-registration feature so that anyone can quickly register as a Restaurant or Deliveryman from the admin landing page, web & customer app.

## **User Account Delete**

Change of mind is one of the most common natures of human beings. Keeping that in our concern, we have the "user account delete" feature. If any users want, they can completely delete their account from Foodfunda anytime.

## **Customer Cart**

If anyone has multiple foods in mind to buy, they can keep adding their desired food to the Cart and keep browsing more options. Finally, he can see a clear overview of his all orders and quickly complete the checkout process from the cart.

## **Wishlist**

Wishlist is another feature that helps customers a lot. They can save their favorite food for future purchases in the wishlist section and quickly buy them anytime from the list.

# **Ordering Process with Foodfunda In A Nutshell: As Simple As It Could Be**

Ordering and delivering with Foodfunda is simpler than ever. Below is the step-by-step process of ordering and delivery in a nutshell. If anything seems confusing to you, feel free to contact our support team. They're always ready to help!

- The first step is for the customer to place an order with the restaurant. Remember, customers cannot order from multiple restaurants at once.
- The deliveryman will be notified about the order in the Order request section of the Deliveryman app and will accept it so that the order can be delivered.
- The restaurant owner gets the order in the dashboard when the delivery boy confirms the order (if delivery confirmation is delivery man) and starts processing the order and hands it over to the delivery boy when the order is ready to deliver.

- Digitally paid orders will go directly to the confirmed status and will appear on the restaurant's dashboard without the delivery boy's confirmation.
- It is not necessary to get the delivery men's confirmation if the store's confirmation model is enabled, but after the restaurant's confirmation, the delivery men will receive the order for acceptance.
- Upon accepting the order (if COD), the Delivery Guy confirms it, picks it up, and delivers it to the customer.
- For orders picked up at the restaurant, all steps will be managed by the restaurant.
- When a scheduled order is placed, all operations will begin 15 minutes before the expected delivery time.

**Don't Just Go for Words, Go for Credibility**

# Manage Entire System with Powerful Admin Panel

Take control of your business with ease!
